

iPad Camera Connection Kit 3 in 1 Card Reader with USB-poort

The moment you connect the iPad connection kit you often will automatically receive the message “this accessory is not compatible with the iPad (type). This message will disappear when you click “oke”

It may happen that your iPad does not recognized the kit immediately. In this case try connecting a USB device or SD card.

The Connection Kit will automatically search for the right portal. It is not possible to use the USB port and the card reader at the same time.

An USB flash drive often will not be supported since it required too much power, which is bounded by Apple of commercial reasons. A USB stick will often not be supported because it required too much power. You can avoid this by using a “jailbreak”. More about jailbreaks you can find on different forums on the internet.
